

Boom Lifts

Boom Lifts Training Toronto - Boom lifts are equipment that has a platform which can be lowered or raised to many heights, therefore making this piece of machinery an important requirement in a wide variety of professions. Accessible in many different specialized varieties such as aerial lifts, scissor platform lifts, and knuckle boom lifts, each type functions very specifically.

Aerial lifts are most oftentimes utilized to transport people at skiing lodges who are not at ease with a ski lift. These platform lifts operate very similar to an elevator, skiers can be slowly but surely moved up the mountain, stopping at stations along the path until they arrive at the top. Aerial hoists are also utilized in construction, transporting workers safely up and down the sides of multi-level building sites.

Scissor lifts are also in the boom jack class. They are utilized normally by service businesses as an idyllic system to permit workers to finish upkeep and repair on wires and cables that are attached to poles. Phone, cable and power companies have relied on the efficiency of this type of boom jack for years.

Knuckle boom forklifts are designed to be used in coarse terrain locales where the need to be able to change direction is necessary. This type of boom is able to fit into various tight places that a scissor jack cannot. Working among multiple equipment in a manufacturing facility or in close proximity stuck between two walls, the knuckle boom also features a standard table fitted with rails for protection and worker safety.

Based on the job requirements and the kind of job to be completed will establish the appropriate type of boom lift to opt for. Fortunately, there is a version suited for just about any application.
