

Toronto Aerial Lift Train the Trainer

Toronto Aerial Lift Train the Trainer - The Aerial Lifts Train the Trainer Certification Program will teach trainers how to effectively train operators in safe industrial mobile machinery operation. Trainers are given in-depth instruction on aerial lift equipment. The program is offered on an open enrollment basis and delivered at select training places. Prior to certification, trainers are assessed and scored based on their demonstrated skills and understanding.

The Aerial Lifts Train the Trainer Certification Program focuses on practical learning and as the top training provider within the industry, we provide top notch hands-on training. We offer a lot of chances to practice the concepts and techniques which are learned inside the classroom. In addition to hands-on experience, trainers develop general understanding of machinery theory and instructional methods, field and classroom communication skills, and ability to successfully train and assess operators. Trainers would gain an understanding of what traits make a successful trainer.

The Aerial Lifts Train the Trainer Program likewise teaches the proper methods required in order to express the right information in the classroom and field environment. There are three factors of machinery operation that the trainer must learn how to convey to operators: what to carry out; how to do it; and why it must be done.

The program offers detailed, up-to-date reference material in order to help trainers convey the subject matter to machine operators. Manuals include detailed information about all aspects of industrial mobile machine operator training. Included in the package are training aids which provide a visual reference in order to improve the learning experience. The equipment-specific training products contain necessary materials meant for both the trainer and the operator: videos/DVD's, overhead transparencies, kinds of equipment, safety message posters; digital training aids and stability pyramid.
