

## Toronto Forklift Training School

Toronto Forklift Training School - Forklift Training School And Its Benefits - Federal and industry regulators have established the criteria for forklift safety training according to their current regulations and standards. Individuals wanting to use a forklift should finish a forklift training program before utilizing one of these machines. The accredited Forklift Operator Training Program is intended to provide individuals training with the practical skills and knowledge to become a forklift operator.

Mobile Equipment and Vehicle safety regulations that apply to forklift use involve pre-shift checks, and regulations for loading and lifting.

Prior to a shift starting, an inspection checklist needs to be completed and given to the Instructor or Supervisor. If whichever maintenance issue is discovered, the equipment should not be used until the problem is addressed. To indicate the machinery is out of order, the keys have to be removed from the ignition and a warning tag placed in a visible location.

Safety rules for loading would comprise checking the forklift's load rating capacity to determine how much the machinery could handle. When starting the machine, the forks must be in the downward position. Keep in mind that there is a loss of around 100 pounds carrying capacity for every inch further away from the carriage which the load is carried.

Lifting must start with the driver moving to a stopped position about three inches from the load. The mast should then be leveled until it has reached a right angle with the load. Lift the forks to one inch below the slot on the pallet and drive forward. Afterward lift forks four inches. Tilt back the load to be able to secure it for moving. Drive the lift in reverse if the load obscures frontal vision. Check behind and honk in order to warn other workers. Never allow forks to drag on the ground.
